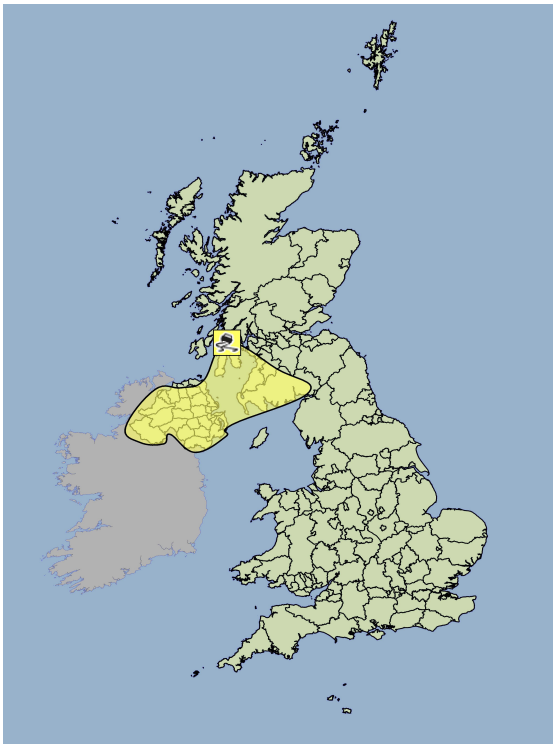
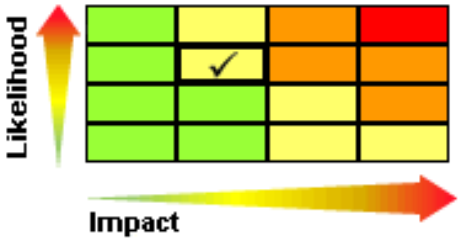
National Severe Weather Warning Service





Chief Forecasters Assessment
As a band of frequent wintry showers and strong to gale force winds clears to the south in the early hours, lighter winds and clear skies will allow wet or snow covered roads to freeze. This will lead to more widespread ice, especially where earlier salt treatments have been washed off. Showers returning from the west early on Saturday morning will be associated with less cold air so any new snowfalls will become confined to hills, but where rain showers fall on untreated roads this could lead to further ice before temperatures rise during the day.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **03:00 on Sat, 21st Nov 2015** until **10:00 on Sat, 21st Nov 2015**

As skies clear overnight following wintry showers, falling temperatures will allow icy stretches to form on untreated roads and pavements. Showers will spread from the west early on Saturday morning, and while these will turn to rain away from the hills, they could fall on frozen roads for a while, enhancing the risk of ice. You are advised to take extra care, and to be aware of difficult driving conditions and the risk of some travel disruption.
